Day in the Life: Manufacturing

In an industry that thrives on speed and accuracy, Zebra for Android devices allow manufacturers to shorten production times and set new standards.

ZEBRA

1

AT GOODS IN

John takes his Zebra for Android TC8000 to the pallets and uses the Mobility DNA SimulScan application to quickly and accurately scan delivery documents. Each document contains multiple barcodes, images, check boxes and lines of text, but SimulScan takes it all in and populates whole digital forms in one scan. John's received and logged the delivery in seconds.

2

PUT AWAY

John now uses Workforce Connect on his TC8000 to summon his team to process the delivery. He uses PTT Express, which adds push-to-talk functionality, to send a group voice message.

3

INVENTORY MANAGEMENT

Tania is checking inventory using her Zebra for Android TC8000. She normally uses the trigger button to activate the scanner but since she's typing with both hands she chooses Swipe Assist, which can turn the whole screen into a scan button.

NO-TILT SCANNING – screen faces the user

UP TO 33% LIGHTER than traditional models

ALL-TOUCH KEYBOARD – 40% faster, 60% fewer errors

HOT-SWAPPABLE battery for uninterrupted use

BALANCED FOR COMFORT – 15% less muscle effort

TUMBLE-TESTED and sealed for work in tough environments

4 ON THE PRODUCTION LINE

Carine is replenishing supplies on the production line, reconciling inventory as she goes. An MC9200 makes this easy; she uses Push to Talk Express, whose 2-way radio function helps her keep a colleague up to date.

5 PLANT MAINTENANCE

Tom has a very short window to carry out a routine maintenance task. TekSpeech Pro on his TC8000 provides a speech-directed workflow, which directs him to the right parts in record time, and complete the required maintenance.

6 FINDING JEFF

Jim should be at Goods In, so his manager checks his whereabouts using Workforce Connect integrated geo-locationing on a Zebra for Android TC70. Discovering that Jeff is held up with a production line task, the manager radios another colleague instead.

7 QUALITY CONTROL

Jacques uses a specialist Android application to carry out compliance verification. He can also use older green-screen apps with ease, because they can be automatically converted for touch-screen use with All Touch Terminal Emulation. Both approaches offer excellent value for money.

TOUGHER battery design

DURABLE shock-resistant housing

ADDED PROTECTION for sensitive electronics

POLYCARBONATE 4H touchscreen

RELIABLE sealed casing

SCRATCH AND SHATTER-PROOF scanner window

HIGHEST ENDURANCE in class – more than 2,000 tumbles

GOVERNMENT-GRADE data security
